

ZINC GOLD URANIUM

Exploring a Diverse, High-Quality Portfolio of Mineral Projects in Western Canada and Guatemala

The geographical diversity of Firestone's portfolio allows for year-round exploration and results.

Torlon Hill generates outstanding zinc results; Sonora drilling produces high-grade gold.

ZINC

Torlon Hill Project, Guatemala
New zone of high-grade zinc discovered in 2007. Exploration has been highlighted by many high-grade drill intersections from a 3,493-metre drill program.

The unprecedented and sustained bull market for zinc continues to increase this project's value.

GOLD, SILVER, COPPER

Sonora Project, Yukon Territory
High-grade drill intercepts open at depth. Located near Sherwood Copper's Minto mine development. Drilling to start in summer, 2007.

URANIUM

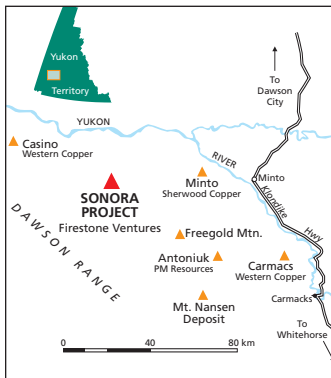

Alberta Sun Project, Alberta
Initial surface exploration for roll-front uranium deposits yields positive results on a large land position.

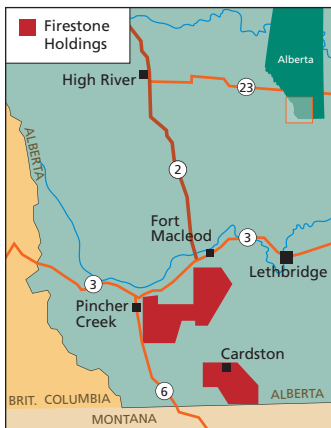

TORLON HILL PROJECT - Zinc

- 41-hole, 3,493-metre drill program now complete.
- New zone of high-grade zinc discovered on west side of Torlon Hill.
- Significant intersections of high-grade zinc during drill campaign, with key assays from 3% to 42.3% zinc and 0.5% to 4.5% lead. Widths of mineralization ranged from 1.5 to 53 metres.
- Mineralization is mostly smithsonite (zinc) and lead carbonates with minor amounts of lead sulphide (galena).
- SGS Lakefield Limited to conduct preliminary metallurgical testing.
- Drill results on Google Earth at www.corebox.net.

SONORA PROJECT - Gold, silver, copper

- Drilled 1,821 metres in 12 holes, late 2006. Next phase of exploration, including 2,725 metres of drilling, is scheduled to begin summer 2007.
- Amadeus Zone returned drill intercept of 6.21 g/t Au across 15.3 m, open at depth, including 12.9 g/t Au across 5.0 m.
- High-grade intersection open at depth in area never drilled.
- Results of separate 2006 Amadeus Zone hole included intercept of 50.1 g/t silver, with 0.321 g/t gold across 19.9 meters.
- 40 km from Sherwood Copper's Minto mine development project.

ALBERTA SUN PROJECT - Uranium

- Firestone holds 100% interest in 207,750 acres prospective for roll-front uranium deposits.
- Completed 2,384 line kilometers of airborne electromagnetic and magnetic surveying in 2006/2007.
- TerraNotes of Edmonton, Alberta currently conducting preliminary analysis of data, to be followed by sophisticated modeling of the dataset.
- Main purpose of the survey is identify buried stream channels and potential sites of sandstone-hosted uranium.

One of Firestone's advantages has been its policy of hiring top geological consultants to manage key exploration programs.
